

## Virtual wallet

The RingGo virtual wallet provides a hassle free alternative to scratchcards and other physical parking solutions. Instead of having to visit a Parking Shop or Council Office, motorists register for the wallet online and top up their account by credit or debit card.

When they park, they use their mobile wallet to pay, using standard RingGo channels and the fee is debited from the account.

### Key benefits

- Online alternative to cash, scratchcards and other physical solutions
- Pay to park by apps, voice recognition or online
- Considerably lower acquiring fees (eg for resident visitor permits) as payments are consolidated.
- Minimal infrastructure/support required

### Key features of the service

- Secure pre-paid parking facility banked direct with the operator
- Top up by credit/debit card or manually through Council Offices
- Email alerts when funds are running low
- Real-time information and reports
- Options for preferential pricing

### Tell me more

RingGo's virtual wallet is a secure online solution which motorists use to pay for their parking. It operates through a pre-paid account which is set up and managed through the myRingGo website. Funds can be added by credit or debit card. Account Management screens show what funds are available.

Managers benefit from the removal of physical services, such as scratchcards and parking permits, as well as the distribution and face to face operations required to support such solutions.
