

Advanced Digital Parking

RingGo's Advanced Digital Parking (ADP) suite revolutionises parking operations. This UK first for parking combines specially adapted pay and display machines with RingGo phone parking to provide digital records of every session purchased.

Vehicle registration is captured for both phone and coin payments, so enforcement can take place by fixed or mobile camera, protecting revenues and significantly reducing on-going costs.

Key benefits

- Fully integrated, end-to-end solution
- Reduced time and effort on enforcement
- Dramatic reduction in on-going costs
- Real time occupancy data based on all parking sessions
- Single source management information

Key features of the service

- P&D cash payments automatically convert to digital sessions
- RingGo phone parking
- Range of ANPR options - mobile handheld, fixed camera or roof-mounted camera car
- Auto-highlight special interest vehicles
- Whitelist/blacklist particular VRMs

Tell me more

With all sessions recorded digitally, RingGo ADP systems quickly identify vehicles that haven't paid or are out of session. They also highlight vehicles of special interest and enable you to whitelist or blacklist vehicles as you desire.

Occupancy levels, and the ability to offer automatic discounts or promotions, provide opportunities outside the realm of standard pay and display parking.

Where is it offered?

Central Bedfordshire BC offers full RingGo ADP (machine and phone payments plus camera car). Red Funnel in Southampton uses RingGo fixed ANPR with cashless parking.
